

O-Tropin

Research suggests that the amino acids found in O-Tropin-including ornithine alpha ketoglutarate, L-glutamine, L-arginine, L-lysine, L-valine, L-isoleucine, L-tyrosine and glycine can help nourish the pituitary gland and support its healthy activity.*

The Difference is in the Delivery

A liposome is a tiny fat bubble. This bubble is made up of layers of phospholipids similar in makeup to our cell membranes. This creates a pouch in which ingredients can be carried, protected and delivered to target tissues in the body. The liposomes are formed through the application of ultrasound technology, which sonically manipulates the formula to create these microscopic liposomes. Liposome Technology is a rapidly expanding area of state of the art pharmacology. It is widely recognized as the optimal delivery system of necessary treatments. However, this method is still under utilized in the natural health arena. O-Tropin harnesses the revolutionary nature and effectiveness of this technology.

A Healthy Pituitary

A healthy pituitary has been associated with many of the following benefits:

- Energy and endurance
- Healthy immune function
- Healthy blood pressure
- Libido / sexual function
- Healthy mood and brain activity
- Healthy metabolism
- Lean muscle mass
- Normal sleep patterns
